Art Unit: 1796

1. Applicant's election without traverse of Group I in the reply filed on 3/13/08 is acknowledged.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishida et al.

Nishida et al. teach the preparation of polysilanes in the presence of a solvent. See for instance Examples 4 and 24 which show polysilanes having a molecular weight within the claimed range. This meets claims 1 and 7.

4. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Choi et al.

Choi et al. teach the preparation of polysilanes. See for instance Example 13 which prepares a polysilane having a molecular weight within the claimed range in the presence of a solvent. This anticipates claims 1 and 7.

5. Claims 1 and 7 to 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al.

Sato et al. teach a method of forming a pattern in which a polysilane film is formed on a substrate. While the general teachings on column 27, line 40 and on, embrace the necessary molecular weight, Example 15, (A) prepares a polysilane meeting the requirements of claim 1. This is in a solution meeting claim 7. It is subsequently coated onto a substrate (column 114, lines 35 and on). This meets claim 9. Note too column 71, lines 29 and on, which teach the requirements of claims 9 and 10. Column 28 teaches the addition of compounds meeting claim 8.

Art Unit: 1796

6. Beppu et al. is cited as being of general interest. This references teaches various polysilanes but refers to their molecular weight only rather than weight average molecular weight.
